(a) error vs. steps
$\mathbb{E}\|X^N - X^{\text{ref}}\|$
reverse sampler steps N
EM, smooth
averaging, smooth
averaging, rough $\gamma_s = 0.42$
averaging, rough + smoothed schedule
averaging, aliased
(b) return on extra steps
error reduction for 8 × steps
ideal 8 × (term C only)
8.22
4.56
3.79
5.35
4.76
